Re: Garden Creek Gas Plant

Dear Mr. Hanner:

We have reviewed the application for a soil vapor extraction system at the Garden Creek Gas Plant. Based upon the information submitted, the Department has determined that the system is an air pollution source of minor significance and a Permit to Construct is not required per Subdivision 33.1-15-14-02.13.n of the North Dakota Air Pollution Control Rules. This determination is contingent upon the following conditions:

1. Construction/operation of the system (with respect to sources of air pollution) shall be in accordance with information provided to the Department as well as any plans, specifications and supporting data submitted to the Department. The Department shall be notified ten days in advance of any significant deviations from the specifications furnished. This determination may be invalidated if the Department determines that a significant deviation from the plans and specifications furnished has been or is to be made.
2. Even though a permit is not required, emissions must still comply with the applicable requirements of the rules.
3. The soil vapor extraction system can be added to the Permit to Operate for the facility upon renewal or modification of the permit for other reasons. Questions regarding the Permit to Operate may be addressed to Kyla Schneider at 701-328-5218 or kkschneider@nd.gov.

The above determination only pertains to air quality requirements. Other divisions (Water Quality, Waste Management and Municipal Facilities) within the Department may have additional requirements. Contact information for the various divisions is listed at the bottom of this letter.

Feel free to contact me at 701-328-5198 or cthirstenson@nd.gov with any questions.

Sincerely,

Craig D. Thorstenson
Manager, Permitting Program
Division of Air Quality
